

Smart Assistive Listening Transceiver

SALT

better hearing for all

SALT is a revolutionary, truly Personal Sound Amplifier that also works as an advanced Bluetooth stereo headset and Assistive Listening Device.

SALT uses a powerful Digital Signal Processor to apply Alango proprietary voice and audio enhancement technologies, which are customizable for specific hearing loss or user preferences.

SALT can be personalized intuitively by a user via a smartphone application. Cleaned, amplified and personally-tuned sound is delivered directly to the user's ears via headphones, or to the user's hearing aid via induction neck loop.

SALT can work additionally as a speakerphone, wireless intercom, vibration alert, smart fall detector, emergency call device, and much more. All features are customizable.

Personal Sound Amplifier with extended connectivity

PERSONAL SOUND AMPLIFIER

Multi-channel sound amplification with advanced beamforming, noise and feedback cancellation

Headphones or neckloop

T-COIL RECEIVER

Directly receives sound of interest in places fitted with induction loop

BLUETOOTH HEADSET
