

Tech in Society

Introducing the Augmented Human

Wednesday 28 February | 11:30 – 12:30 | Auditorium 5

Session Description

Technological innovation is accelerating the integration of robotics and artificial intelligence as extensions of our body, mind and behaviour in the quest to live longer, healthier and happier lives. Wearables, implants, haptic tech development and brain-controlled interfaces are just some of the technologies that are changing the face of mhealth and insurance.

In this session, we map the future human, showcased by a cross section of emerging and incumbent companies working at the absolute edge of what we recognise as possible. Meet the innovators who are bring cyborgism into the realm of reality. Get ready to be inspired and have your perception of what is an achievable future for mhealth completely challenged as we introduce to you; the Augmented Human.

Session Short Blurb Description

Technological innovation is accelerating the integration of robotics and AI in the quest for humans to live longer, healthier and happier lives. In this session, meet the innovators who are bring cyborgism into the realm of reality and changing the face of mhealth. Get ready to be wowed as we introduce to you; the Augmented Human.
